

Origami Candy Cane

You can use these candy canes in all sorts of craft projects at Christmas time. They are simple and straightforward to fold, and they look cute hanging on the Christmas tree!

A glue stick comes in useful!

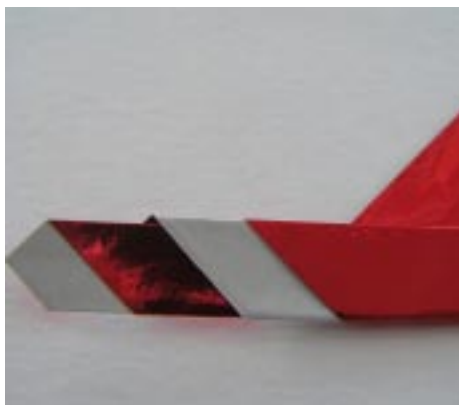

1. With the colored side down on the table, fold your square ALMOST in half diagonally, leaving a white edge as shown in the photo.

2. Flip over.

2. Turn the long edge over once, making sure that you form a reasonably even "V" shape at the ends (see the arrows above).

3. Fold over again, and again, until you have completely folded the candy cane.

4. You may find it helpful to use your glue stick to stick down the final flaps of the candy cane. Now form the curve by folding the cane at right angles once ..

5. and twice.
