# Origami Koala

This very cute koala is a simple model to fold and makes a perfect project for beginners who are looking to push themselves just a little.
You could make a koala collage scene: use brown paper to cut out a tree trunk and green paper to cut eucalyptus leaves. Assemble your pieces together on a blue background paper.
1. With colored side down, fold your square in half on the diagonal.

2. Fold one of the top points down to the bottom, as shown.
3. Now fold the other side down.

4. Begin to form your koala's ears by folding one of the flaps up and out at an angle, as shown.

5. Now fold the other flap out too. Crease well.
6. Blunt the ears by folding down the ends.

7. Shape the head by folding the top corner of your model down until it is level with the ears.

8. Finally, finish shaping the head by turning the bottom up on one side as shown ...

9. and then bringing the other side up to form the chin.

9.Flip the model over, and add features, using ours for inspiration.
