

Make Your Own Weather Vane

Use the template to cut two roosters from card. Glue the roosters back to back leaving a gap in the middle. Place a stick (skewer or garden cane works well) in the gap. Tape the top of the gap closed so the rooster stays at the top of the stick but can spin freely. Hold the stick up and watch your rooster spin. Use a compass (or map) to work out which direction the rooster is pointing so which way the wind is blowing.
