

# Origami Angel Fish

This is the simplest of all fishes - using just two folds - but it is very effective, especially if you make a few! The position of the folds can be a little confusing, but once you have the hang of it you will find the fish very easy to make.

We have used stick-on googly eyes and a black marker to draw the features.

1. Fold the top right corner of your square down along the line indicated in the photo above - it will very strange to do!

2. This is how it will look when you have creased it well. Now fold the whole thing again, this time along the line above.

3. Flip it over, and you should have an angel fish!

4. Add an eye and a nice smiley mouth.
